CSS part

Reflection (5 marks)

To reflect on this learning process, you will also need to include a written summary or reflection answering the following :

1) a summary and justification of the design/development choices you made

We used the Bootstrap template to create a carousel, cards and navbar… etc, the previous website is a little bit complex. The background is too messy on the previous website, so we made it looks simple and put the carousel as the banner to highlight the important information.

2) Any challenges you faced or things you found difficult

Since we used the bootstrap HTML file looks complicated and not easy to locate the errors, find elements.

If we don't clarify the tasks before starting we might have some confusion and conflict in group working.

3) Any wins (things that worked out well and you are proud of!)

The layout looks better than the previous one. We expected that we could spend much time to do this project, but we spend less than expected.

4) Anything you learned in the process (team work, collaboration, version control, Grid,Flexbox, Bootstrap etc.)

It was difficult to divide the tasks. Because we have different things to work, so it is hard to find the time to get together. However, we have a good leader(Nvi) and every member works spontaneously.

Typography & Size

Navbar and header1 header2

Sigmar one | 50px/60px

## Sigmar one | 40px/50px

Header 3

Verdana | 35px

Header 4

Cadman 32px

Paragraph

Lucida Grande | 12px

Colours

#281f0d   #f36e09

Button Styles

Font: Lucida Grande
